

Complete Green Systems has completed three commercial solar installations at Code Electrical Classes. The school is located at 7449 Citrus Avenue, Winter Park, FL 32792, just one block North of Aloma near Palmetto. There are three (3) PV systems on site for viewing and education. The first is a 7.56kW PV system comprised of 36 Sanyo 210 HIP modules and 36 Enphase inverters. The second is a 1.8kW central inverter grid tie system on the roof of the solar center which is the operational model of the one below in the solar center instructional area. The last system is the prized 2.76kW 2-axis tracker system which is comprised of 12 SolarWorld 230 modules and 12 Enphase inverters. We have computers and large screens in the facilities that will show the Enphase website for the 7.56kW system and the 2.76kW tracker system.

It was our honor to have been chosen by Mr. Tom Henry to install the systems that will be used to teach the proper installation of the PV systems for the next generation. Code Electrical School and Mr. Henry are known worldwide as one of the top electrical instructional facilities.
